Organiser:

The world is at a critical juncture, where the effects of climate change continue to disrupt economies, businesses and societies. Due to Asia's significant population base, robust economic development and a strong long-term growth potential, this region is where the battle against climate change will be won or lost. It is imperative that our actions and strategies mirror the urgency of these times. Reducing greenhouse gas emissions and adapting to the evolving climate are not merely options, but a fundamental necessity. Energy Asia offers the much-needed platform to discuss and debate the tectonic changes underway in the energy landscape.

Energy Asia 2025

Energy Asia is a premier thought leadership and business advocacy forum, championing Asia's pivotal role in the global energy transition. As the "Voice of Asia," we bring together policymakers, industry captains and energy professionals to drive practical, collaborative, and inclusive solutions that meet the unique challenges and opportunities of developing and emerging economies. Through dynamic dialogues, actionable roadmaps, and strategic partnerships, Energy Asia accelerates the implementation of sustainable energy practices while fostering equitable growth. As we navigate this critical decade, Energy Asia is not just a platform for ideas — it is where Asia's energy future takes shape.

On 16–18 June 2025, with the theme "Delivering Asia's Energy Transition", the second edition of Energy Asia will host a series of strategic discourse between influential speakers and prominent scholars from across the energy ecosystem.
